

# YOUR IMMUNIZATION REPORT CARD

## 1 REVIEW

your clinic's adolescent vaccine coverage.

Clinic name \_\_\_\_\_ VFC PIN # \_\_\_\_\_ Date \_\_\_\_\_

Your clinic has...	HPV, $\geq 1$ dose	Meningococcal, $\geq 1$ dose	Tdap
patients, age 11-12	%	%	%
patients, age 13-17	%	%	%

Data are from our state's immunization registry. Column 1 shows the number of patient records in each age group for your clinic. Columns 2-4 show the percentage of those patients who have been vaccinated.

## 2 SET A GOAL

to improve HPV vaccine coverage in the next 6 months.

HPV Goal	Progress at 3 months	Progress at 6 months
patients, age 11-12		
patients, age 13-17		

Column 1 shows the number of patients you need to vaccinate with the 1st dose of HPV vaccine to meet your goal. The goal equals 15% of total patients. Columns 2-3 show the number of patients vaccinated at 3 and 6 months.

## 3 RECOMMEND

HPV vaccination for adolescents, starting at age 11.

Offer HPV vaccine in the same direct way you recommend other vaccines. Try saying:

"Your child is due for vaccines that prevent meningitis, HPV cancers, and pertussis. We'll give those at the end of today's visit."

Your recommendation is the single biggest influence on parents' decisions to get HPV vaccine for their children. The vaccine produces a better immune response in younger adolescents. Vaccinating in the preteen years is best.
